1 [On the design of the amoeba configuration manager](#)

E. H. Baalbergen, K. Verstoep, A. S. Tanenbaum

October 1989 **ACM SIGSOFT Software Engineering Notes , Proceedings of the 2nd International Workshop on Software configuration management**, Volume 14 Issue 7

The program Amoeba Make, or Amake, is being designed to fulfil the need of a make-like configuration manager capable of exploiting the potentials of the Amoeba distributed operating system. The major design goal is to create a software configuration manager that is both easy to use and efficient. The specification and maintenance of a large configuration should be easy, and should be automated as much as possible. Furthermore, the build pro ...

2 [An object-oriented approach for model integration within virtual human: a computational environment for physiological modeling](#)

Ming Gu

October 2002 **Journal of Computing Sciences in Colleges**, Volume 18 Issue 1

This project applies object-oriented principles and hierarchical design to improve the structure and run-time performance of a large simulation package. At Oak Ridge National Laboratory (ORNL), Virtual Human (VH) is being developed as a simulation platform to investigate a wide range of human biological and physical responses to stimuli. The long-term goal of VH is to produce a comprehensive simulation of the structure and function of the entire human body that would integrate smaller models of ...

3 [Routing design in operational networks: a look from the inside](#)

Geoffrey Xie, Jibin Zhan, David A. Maltz, Hui Zhang, Albert Greenberg, Gísli Hjálmtýsson

In any IP network, routing protocols provide the intelligence that takes a collection of physical links and transforms them into a network that enables packets to travel from one host to another. Though routing design is arguably the single most important design task for large IP networks, there has been very little systematic investigation into how routing
